This book presents an overview and assessment of the conceptual advances in economics during the last century. The book relies heavily on engaging examples, intended to draw in the reader and to demonstrate the far-reaching application of economic reasoning to social phenomena. The book is aimed at a broad audience including those with little or no formal training in economics. Readers will come to appreciate the novel insights and methods developed by economists in recent decades.

This book provides new insights in theoretical/methodological studies and research applications in space economy. It cover topics such as: Spatial economics; concepts in spatial & social sciences; quantative comparative research; analysis of transport networks; urban & regional planning.

The field of behavioural economics can tell us a great deal about cognitive bias and unconscious decision-making, challenging the orthodox economic model whereby consumers make rational and informed choices. But it is in the arena of health that it perhaps offers individuals and governments the most value. In this important new book, the most pernicious health issues we face today are examined through a behavioral economic lens. It provides an essential and timely overview of how this growing field of study can reframe and offer solutions to some of the biggest health issues of our age. The book opens with an overview of the core theoretical concepts, after which each chapter assesses how behavioral economic research and practice can inform public policy across a range of health issues. Including chapters on tobacco, alcohol and drug use, physical activity, dietary intake, cancer screening and sexual health, the book integrates the key insights from the field to both developed and developing nations. Also asking important ethical questions around paternalism and informed choice, this book will be essential reading for students and researchers across psychology, economics and business and management, as well as public health professionals wishing for a concise overview of the role behavioral economics can potentially play in allowing people to live healthier lives.

This document provides a guide for the development of the 2006 National Assessment of Educational Progress (NAEP) Economics Assessment. The framework is designed to assess the outcomes of student education in and understanding of economics in grade 12 as part of NAEP. Economic literacy is defined as the ability to identify, analyze, and evaluate the consequences of individual decisions and public policy and includes an understanding of: (1) Fundamental constraints imposed by limited resources, the resulting choices people have to make, and the trade-offs they face; (2) How economies and markets work and how people function within them; and (3) Benefits and costs of economic interaction and interdependence among people and nations. The content of the framework is grouped into three areas: Market Economy (relevance of limited resources; how individuals and institutions make and evaluate decisions; role of incentives; how buyers and sellers interact to create markets; how markets allocate resource; economic role of government in a market economy); National Economy (concepts, terminology, and data used to identify and describe inflation, unemployment, output, and growth; factors that cause changes in those conditions; role of money and interest rates in an economy; mechanics and the appropriate uses of Federal Reserve monetary policies and federal government fiscal policies); and International Economy (reasons for individuals and businesses to specialize and trade; rationale for specialization and trade across international borders; comparison of the benefits and costs of that specialization and resulting trade for consumers, producers, and governments). Within each content area, questions are designed to assess economics in three cognitive categories: (1) Knowing; (2) Applying; and (3) Reasoning. The following are appended: (1) References; (2) NAEP Economics Framework Project; (3) Steering Committee Charge to the Planning Committee; (4) Sample items (Market Economy; National Economy; International Economy); (5) Framework Development Process; and (6) Acknowledgments. (Contains 2 tables.) [Assessment and Item Specifications: NAEP 2006 Economics is a companion document to this framework.]
