Sodium Thiosulphate solution ($\text{Na}_2\text{S}_2\text{O}_3$) is as follows: Thiosulfate solutions do not always have a stable titer. They can be decomposed due to catalysis by traces of heavy metals, oxidized by microorganisms or they undergo CO_2 absorption. This reduces the molar concentration.

Sodium thiosulfate - Wikipedia

Sodium thiosulfate is often standardized with potassium dichromate. In the standardization, iodine (triiodide) liberated by potassium dichromate in an acidic potassium iodide solution is titrated with a sodium thiosulfate solution. The iodine liberation process significantly affects the titration results.
